

RISK ANALYSIS AND REVIEW

RMC Group will conduct a risk management analysis of your insurance needs. Our review includes an analysis of your existing insurance policies, providing a detailed evaluation of your existing coverage. We will identify gaps in your coverage and offer you several options for covering those gaps. We will identify emerging risks that your business may face, help you evaluate your risk priorities and provide you with the most cost-effective ways to implement a risk management program.

In addition to reviewing your property and casualty coverage, we will also review your employee medical coverage. Our goal is to provide you with solutions to better align your insurance portfolio with your business goals.

Our review of your insurance portfolio may uncover insurance needs that are not available in the commercial market or may be prohibitively expensive to cover. In those cases, we may recommend that you consider establishing a captive insurance company or that you utilize some other form of alternative risk transfer. A captive insurance company is a risk management tool that may enhance your insurance program.

RMC Group's professionals bring knowledge, experience and an unbiased perspective to each task. Combining technical proficiency with broad-based business experience, we develop solutions that are practical, actionable, and customized for your business.

To get started, provide RMC copies of your commercial property and casualty insurance policies, as well as the summary plan documents for your existing employee medical plan. Then we can produce a risk analysis for your business. Don't wait. Let's get started today!
